EUCervScreen – implementing national cancer screening programmes

By enhancing breast, cervical, and colorectal cancer screening, and introducing new programs for lung, prostate, and gastric cancers, the project supports Europe's Beating Cancer Plan through AI, personalized approaches, and robust quality assurance.

Start date – end date
June 2024-May 2028

Countries
Austria, Belgium, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Lithuania, Malta, Moldova, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Ukraine

Overall budget
EUR 38 749 935

EU contribution under EU4Health programme
EUR 30 999,929

Europe represents 10% of the world's population but faces 25% of global cancer cases, with 2.7 million diagnoses and 1.3 million deaths in the EU in 2020. Early detection and screening are critical to improving survival rates.

Despite EU recommendations, cancer screening programmes for breast, cervical, and colorectal cancers are often incomplete, lacking data quality and consistency across Member States.

EUCanScreen aims to support Europe's Beating Cancer Plan, by helping EU Countries to ensure that 90% of eligible EU citizens are offered screening for breast, cervical, and colorectal cancers. The project also facilitates the implementation of new screening programmes for lung, prostate, and gastric cancers.

EUCanScreen addresses the integration of AI, personalized screening, and quality assurance while providing cost-effectiveness analyses, governance models, and training to help EU countries implement and optimise sustainable cancer screening programmes.

EUCanScreen will address the following areas

1. **EARLY DETECTION AND CANCER MORTALITY REDUCTION:**
Improved cancer survival rates through high-quality screening, detecting cancers at earlier, curable stages.

2. **ENHANCED SCREENING PROGRAMMES:**
Strengthening national screening programmes via cross-border expertise and evidence-based decision-making.

3. **PERSONALISED SCREENING:**
Integration of AI and risk-based methods for more targeted, effective, and less invasive screenings.

4. **TRAINING AND EXPERTISE:**
Establishment of regional centres and specialised training to improve screening quality across Europe.

5. **WIDER SOCIETAL IMPACT:**
Increased awareness and participation in screenings, leading to better health outcomes and reduced cancer burden.

6. **COST-EFFECTIVENESS:**
Tools for cost analysis to optimise resource use and ensure long-term sustainability of screening programmes.
