85 000 students

11 500 staff

35 departments

5 associated partners

5 Education & Training

Focus areas

- AI in Curricula
- Green & Smart City Innovation
- Responsible AI Governance
- Smart UniverCities

- CEU Abat Oliba University, ES
- Berlin University of Applied Sciences, DE
- ESSCA School of Management, FR
- Heilbronn University of Applied Science, DE
- Kozminski University, PL
- Luxembourg School of Business ASBL, LU
- Polish-Japanese Academy of Information Technology, PL
- ISM University of Management and Economics, LT
- University of Piraeus Research Centre, EL
- Zagreb School of Economics & Management, HR

Vision

EUonAIR envisions a future where Artificial Intelligence seamlessly integrates into education, research, innovation, and societal impact. By 2040, it aims to be a self-sustained and collaborative university, fostering the responsible use of AI in higher education across Europe and beyond. EUonAIR is transforming education by embedding AI into curricula across its eleven partner institutions, aiming to close the AI skills gap necessary for the green and digital transitions. As AI systems become increasingly embedded in public services, education, and industry, EUonAIR actively contributes to shaping governance models that align with European values, uphold fundamental rights, and ensure democratic oversight, aiming to establish a benchmark for trustworthy, human-centric AI governance in the higher education sector and beyond.

PIONEERING NEW LEARNING OPPORTUNITIES ACROSS BORDERS

My Migration Assessment Dashboard will support students and staff in the return phase of their mobility experience—a critical moment of reintegration into their home institution. The dashboard enables individuals to assess and reflect on the skills, experiences, and competencies they gained abroad, and maps them into career pathways, academic progression, and institutional development.

EUonAIR micro-credentials in AI in related fields e.g. "Generative AI for Executives," "Fair Machine Learning," and "AI in Education" are recognised across partner institutions, providing students with flexible, stackable learning options that contribute to their professional growth in European and global job markets.

EUonAIR joint flexible European curricula offer transdisciplinary learning and challenge-based approaches that equip students with real-world skills, in collaboration with enterprises, cities, and NGOs offering work-based learning experiences and practical knowledge application. Students in business, law, and healthcare will benefit from courses like "AI Ethics in Business," "Artificial Intelligence and Legal Issues," or "AI in Healthcare."

EUonAIR opportunities for professional development and collaboration equip students and staff with a comprehensive, cross-sectoral understanding of AI and its societal impacts with joint educational offers spanning multiple disciplines—from "AI for Creative Work" to "AI and the Environment".

INNOVATIVE EUROPEAN INTER-UNIVERSITY CAMPUS

EUonAIR's virtual campus, **MyAI University,** serves as a platform for collaborative learning and research that integrates shared course catalogues, cloud infrastructure, and collaborative tools to ensure seamless cooperation across institutions.

A Hybrid Holistic Mobility Support Centre will include mobility counselling services, an AI-assisted international mobility navigator, a bank of mobility practical services, and reception and farewell desks.

ENHANCED RESEARCH AND INNOVATION COOPERATION

The Centre of Excellence in Responsible AI and Education will promote joint research projects that drive innovation and responsible AI use in education such as collaborative research on AI ethics in education, inclusive algorithm design, or AI-assisted learning environments.

Seed-funding initiatives for early career researchers will support small-scale collaborative projects, research visits, or interdisciplinary workshops across the alliance. Examples include micro-grants for pilot research, mobility stipends for PhD candidates, or co-funded thesis supervision across institutions.

IMPACT AT REGIONAL AND NATIONAL LEVEL

EUonAIR fosters responsible governance in the development and use of AI technologies, including setting ethical standards, ensuring transparency in AI systems, and creating regulatory frameworks that promote the fair and inclusive use of AI across Europe.

Through **Smart UniverCities** EUonAIR will collaborate with municipalities to develop smart, sustainable, innovative AI-driven urban solutions such as energy-efficient urban infrastructures, AI-driven waste management systems, and smart transportation, contributing to more sustainable urban living environments.
