2.3. INNOVATION AND TECHNOLOGY 54

2.3.1. General Overview 54

2.4. CAPACITIES FOR SCIENCE / INNOVATION AND TECHNOLOGY 57

2.4.1. General Overview 57

1. POLICY BACKGROUND

The partnership with Africa is a key geopolitical priority for the European Union (EU), driven by our close economic, cultural, and geographical ties, as well as a shared history and common interests. EU-Africa relations are built upon two complementary frameworks: the Africa-EU Partnership and the new Partnership Agreement with the Organisation of African, Caribbean and Pacific States (OACPS).

Established in 2000 at the first Africa-EU Summit in Cairo, the Africa-EU Partnership serves as the formal political channel for the EU's relations with Africa. Since the second EU-Africa Summit in Lisbon in 2007, it has been guided by the Joint Africa-EU Strategy. At the summit held in Brussels on 17-18 February 2022, a Joint Vision for 2030 was adopted.

1.1. EU-AFRICA COOPERATION IN RESEARCH AND INNOVATION

The AU-EU High Level Policy Dialogue (HLPD) on Science, Technology and Innovation sets the long-term policy priorities for enhancing Africa-Europe cooperation in research and innovation. Initiated at the third AU-EU Summit in Tripoli in 2010, it forms a crucial component of the Joint Africa-EU Strategy.

1.1.1. Priorities and partnerships

Based on the work of the HLPD, the joint thematic priorities for Research and Innovation were announced during the first ministerial meeting of the African Union and European Union Research and Innovation (R&I) ministers in July 2020:

- Public Health
- Green Transition
- Innovation and Technology
- Capacities for Science

Specific partnerships and initiatives are in place for each priority area.

1.1.2. AU-EU Innovation Agenda

The joint AU-EU Innovation Agenda aims to transform and increase the innovative capacities and achievements of European and African researchers and innovators into tangible outputs, such as products, services, businesses and jobs in Africa and Europe. Politically adopted on 19 July 2023, this 10 year-Agenda represents the mainstay of the cooperation on Science, Technology and Innovation between Africa and Europe until 2033. It is supported, from the EU side, by the Global Gateway Africa – Europe Investment Package and by the EU R&I Framework Programme Horizon Europe. It builds on the prior work of the Africa-Europe Innovation Partnership conducted until 2021, under the aegis of the HPLD.

The AU-EU Innovation Agenda is structured according to the priority areas of AU-EU Cooperation in R&I: Public Health, Green Transition, Innovation and Technology, and Capacities for Science, complemented by the additional area of Cross-cutting issues. It details actions across short-, medium- and long-term timelines, organised by these thematic areas, to achieve its four objectives: “Make it real”, “Generate impact by design”, “Strengthen people, communities & institutions” and “Learn, monitor and scale it up”.

It is accompanied by a Roadmap, which provides an overview of the governance and coordination of the implementation as well as of the Monitoring, Evaluation and Learning of the Agenda. It will

be constantly updated to include additional initiatives in the coming years. Several initiatives will contribute to its implementation, including European Union programmes such as Horizon Europe and the Global Gateway Africa-Europe Investment Package, the AU Commission, EU and AU Member States and other organisations.

The adoption of the AU-EU Innovation Agenda was acknowledged in the joint communiqué of the 3rd EU-AU Ministerial of 21 May 2025.

As part of the joint AU-EU Innovation Agenda, the following steps have already been taken:

- The AU-EU Innovation Interface was established to provide information on initiatives and opportunities for innovators, entrepreneurs, researchers and investors, generated by the AU-EU Innovation Agenda. Among other resources, this Interface gives access to a new "AU-EU Deep Tech Transformation Training Scheme", addressed to innovators and entrepreneurs. It also includes reports of workshops undertaken in the context of the Agenda.
- An Innovation Festival was held in Cape Town, South Africa in June 2023, to provide a platform to showcase and discuss innovation with a specific focus on women innovators and young people.
- A Dashboard of Initiatives was launched in March 2024, representing a "living inventory" of projects, programmes, partnerships and scholarships officially recognised as contributing to the implementation of the AU-EU Innovation Agenda.
- Biannual Workshops take place as part of the ongoing implementation of the Innovation Agenda. The first one, on Intellectual Property Rights took place in November 2023. The second Virtual Workshop focused on Access to finance for Innovation and occurred on 29 May 2024. The third Workshop, focused on innovations in Public Health, and was held on 3 December 2024. The fourth Workshop, focused on Artificial Intelligence for facilitating and strengthening R&I at the Africa-Europe Interface, and took place on 15 April 2025.On 23 October 2025, an Innovation Fair will take place in Brussels and online - with the running theme title of "Enabling that step forward", the Innovation Fair aims to showcase the vibrancy of the cooperation among European, African and Mediterranean innovation ecosystems, promoting innovative solutions with potential for market and societal uptake, vis-à-vis potential public and private funders and fostering networking, matchmaking and collaborations.

2. PROJECTS FUNDED UNDER HORIZON EUROPE's WORK PROGRAMME 2023-2024 (AFRICA INITIATIVE II)

As a strategic partner, the EU aims to strengthen cooperation with Africa to promote actions that support locally adapted solutions to global challenges, which often impact Africa the hardest.

The Horizon Europe Work Programme 2021-2022 launched the first Africa Initiative with around 40 topics, contributing approximately €350 million from the EU under calls for proposals particularly relevant for cooperation with Africa (Africa Initiative I). This resulted in more than 70 projects funded, involving around 180 African entities.

Similarly, the Horizon Europe Work Programme 2023-2024 included the "Africa Initiative II", featuring nearly 30 topics and a total EU contribution of approximately €300 million. This initiative aims to contribute to the implementation of the short-term and medium-term actions of the AU-EU Innovation Agenda, particularly in the areas of:

- *Green Transition*
- *Innovation and Technology*

- *Capacities for Science*
- *Cross-cutting issues*

Additionally, the AU-EU Innovation Agenda priority area of Public Health was mainly addressed through the 2023 calls of the Global Health European and Developing Countries Clinical Trials Partnership 3 (EDCTP3) Joint Undertaking. Moreover, other Cross-cutting issues of the Innovation Agenda were supported by initiatives such as the Marie Skłodowska-Curie Actions (MSCA) and the European Research Council (ERC) projects (Pillar I of Horizon Europe).

The topics supported under Africa Initiative II cover a wide variety of themes, including climate change adaptation and mitigation, clean energy, food and nutrition security, sustainable agriculture, agroforestry and agroecology, food safety, food markets and trade, processing and refining of raw materials, earth observation, space-based applications, and strengthening research infrastructures and coordination of Africa-Europe partnerships.

Of the total 58 projects targeted as part of the Africa Initiative that require or encourage African participation, 35 indeed feature collaboration with African entities, involving 163 entities from 29 African countries.

The purpose of this booklet is to provide a detailed overview of the projects part of the "Africa Initiative II" that entail participation of both European and African entities. Accordingly, this booklet includes 35 projects that have involved at least an institution from one African country. This represents 60% of the total 58 projects, since not all Africa Initiative II projects included African entities. This focus emphasises the importance of fostering active African participation within the consortia of projects part of Horizon Europe "Africa Initiatives".

2.1. AFRICA INITIATIVE II's GENERAL OVERVIEW

The table below presents the overall results of the Africa Initiative's 58 targeted projects:

Priority Areas	Number of projects	NET EU contribution (M€)	Number of African partners (% of total)	Number of European partners (% of total)	Number of African countries	Number of European countries	EU funding to African partners (M€) (% of total)
Green transition (CCSE + FNSSA)	43	262.6	143 (24%)	459 (76%)	28	29	39.7 (15.1%)
Climate Change and Sustainable Energy (CCSE)	28	170.1	64 (18%)	295 (82%)	19	28	17 (10%)
Food and Nutrition Security and Sustainable Agriculture (FNSSA)	15	92.5	79 (33%)	164 (67%)	26	29	22.7 (25%)
Innovation & Technology	9	25.1	9 (11%)	65 (79%)	5	16	0.5 (2%)
Capacities for Science / Innovation & Technology	6	11.8	27 (47%)	31 (53%)	14	11	3.4 (29%)

Following this introduction, the 35 projects with specific African participation under the Africa Initiative II are presented by priority areas.

2.2. GREEN TRANSITION

2.2.1. General Overview

Priority Areas	Number of projects	NET EU contribution (M€)	Number of African partners (% of total)	Number of European partners (% of total)	Number of African countries	Number of European countries	EU funding to African partners (M€) (% of total)

C. DESCRIPTION

Co-innovating tailored climate services for African livelihoods

Food security serves as the cornerstone of billions of livelihoods worldwide, particularly in African rural and urban settings. However, the intensification of weather and climate risks presents a formidable challenge. Existing climate and agricultural services often operate in silos, failing to address the interconnected needs of communities. The EU-funded SAFE4ALL project tackles this issue by providing tailored climate services in Ghana, Kenya and Zimbabwe. By engaging local communities, municipalities and cities, it aims to build resilience, enhance food security and manage migration. SAFE4ALL fosters collaboration between governments, academia and civil society to develop scalable climate solutions. With a user-centred approach, it seeks to integrate climate information with agricultural practices, promoting sustainable livelihoods and social safety nets.

C. DESCRIPTION

Resilient climate services in Sub-Saharan Africa

Floods, tropical cyclones, and other climate-change-associated events severely impact Sub-Saharan Africa. Communities at risk urgently need methods to increase their resilience to these extreme events. The EU-funded ACACIA project aims to enhance the resilience of at-risk communities in sub-Saharan Africa to climate impacts, focusing on floods in the Greater Horn of Africa and both floods and tropical cyclones in Madagascar. The project seeks to improve the production, dissemination, and use of climate services to reduce climate risks and address obstacles to climate adaptation. Social scientists and climate scientists will collaborate to assess and improve climate services, and an extensive training and capacity-building programme will involve national and regional meteorological services.

2.2.2.1.3. Advancing knowldge for Long-term Benefits and climate Adaptation ThRough hOlistic climate Services and nature-based Solutions

C. DESCRIPTION

Climate services and nature-based solutions for climate adaptation in Sub-Saharan Africa

Sub-Saharan African countries face significant vulnerability to climate change and weather-related disasters, with severe impacts on safety, water and food availability, exacerbating poverty and inequality. Climate-related threats spur internal migration and urbanisation, increasing risks in low-income settlements. The EU-funded ALBATROSS project aims to accelerate climate adaptation in Sub-Saharan Africa by pioneering innovative and sustainable adaptation strategies based on nature-based solutions and grounded in actionable climate information. The project will establish a Climate Resilience Development Network across Sub-Saharan Africa, integrating indigenous communities, research organisations and policy actors to co-create and deploy community-driven climate services, climate predictions and decision-making relevant tools. The aim is to foster cooperation and capacity-building across borders for effective climate adaptation and sustainable development pathways

C. DESCRIPTION

HiHELIOS aims to deliver a TRL 7 modular, scalable, circular-by-design and safe Hybrid Energy Storage System (HESS) that combines High-Power storage capabilities of LFP battery or supercapacitors, with High-Energy storage capabilities of second-life NMC batteries. To achieve this, HiHELIOS will adapt the modular, flexible and scalable HESS architecture developed in the EU project SEABAT to grid applications and EV charging support. HiHELIOS aims to design the HESS based on the shelf battery modules and components, and repurposing EV 2nd life battery modules. Supported by digital models, HiHELIOS will custom design and manufacture a HESS for 4 use-cases of problem owners to solve a real-life hybrid energy storage challenge.

In HiHELIOS, the use-cases altogether cover storage services for supporting grid-connected microgrids and islanded grids; renewable energy uptake in weak and weak islanded grids; and EV charging, EV and E-boat fast-charging infrastructures, as well as ancillary services. The HiHELIOS HESS contains an innovative BMS and physics-based and data-driven PMS, EMS and cloud platform (based in the RED and Battery passport principles) enabling multiple (fast) services.

HiHELIOS immediately achieves impact, because the 4 HiHELIOS demonstrators will stay in-use at the use-case owners after the project, until their end of life. HiHELIOS develops a roadmap to TRL 9 together with main stakeholders in the energy sector and creates fertile soil for market application with replication studies. HiHELIOS will bring long duration storage (>12 hours) within reach, against storage costs of less than €0.05/kWh/cycle by 2030, with a projected cycling life of >5,000 cycles. Via BRIDGE, ETIP-SNET and CEN-CENELEC, the experience emerging from HiHELIOS be used as input to national and EU-level standardization processes.

HiHELIOS brings together a consortium of 12 partners from 6 countries, of which 4 partners are SMEs and 3 partners are from widening countries.

2.2.2.2.2. Safe, sustainable and Modular HYbrid systems for Long-duration Energy storage and grid Services

C. DESCRIPTION

Hybrid systems for sustainable energy storage

Energy storage systems (ESS) are increasingly vital due to the rise of renewable energy sources. However, current ESS technology faces challenges related to fire safety, sustainability, and inflexible energy and power design. In this context, the EU-funded SMHYLES project will develop sustainable hybrid energy storage systems (HESS) by combining two low critical raw material storage technologies. The project will design, construct, deploy and demonstrate two types of HESS (aqueous-based and salt-based) and demonstrate storage capacity extension of an existing HESS. These will be used for various applications, including islanded grids, industrial microgrids, provision of grid services, and electric vehicle charging, across demonstration sites in Portugal and Germany. Additionally, the project will develop digital twins to enhance system monitoring and optimisation.

C. DESCRIPTION

Smart solutions for grid support and charging infrastructure

Rising energy demands coupled with the intermittent nature of renewable sources pose significant challenges to grid stability and sustainability. This gap hampers the integration of renewables and the widespread adoption of electric vehicles, hindering progress toward a greener future. In this context, the EU-funded HAVEN project takes a comprehensive approach to develop a cutting-edge, sustainable, and safe Hybrid Energy Storage System (HESS). By integrating high-energy and high-power storage technologies with advanced cognitive functionalities and cyber-secured energy management tools, HAVEN aims to create a modular, scalable, and cost-efficient solution. Moreover, it pioneers the development of a flexible Digital Twin, ensuring predictive maintenance and performance optimisation. The focus is on grid support services and electric vehicle charging.

C. DESCRIPTION

SWARM-E is a trans- and multi-disciplinary approach for sustainable, affordable and modern energy access and well-being for Sub-Saharan Africa, aligned with the AU-EU Agenda 2063.

SWARM-E consists of several layers: 1) an innovative renewable electricity infrastructure, the SWARM grid, a circular and cyber-smart network where end-users exchange electricity of their solar home systems and form the nodes of a smart grid which can dynamically grow to meet demand; 2) unlocking unutilised renewable energy for productive uses in the water energy food nexus – cold storage, water purification, water pumping and irrigation, carpentry; 3) transfer and decentralisation of Global North energy transformation innovations – decentralised hydrogen production for cleaner cooking, bi-directional charging of light electric vehicles (two- and three-wheelers) to transport goods and people. SWARM-E builds on network effects generated through the inclusion of localised economies with strong producer-consumer linkages embedded within larger systems of trade and exchange for the creation of bottom-up energy communities.

SWARM-E will operate and replicate 5 pilots in Rwanda and Tanzania, under which 5 SWARM grids are installed, delivering 6.9 GWh of renewable electricity while generating income through the trading of electricity and avoiding the discard of 3,200 batteries; 5 water purification applications deliver 101.M L of clean water; 15 light electric vehicles deliver farmers' produce, power mobile productive uses and cold storage, increasing the yields of 1,000 farmers and reducing the food losses of more than 5,000; 700 kg of H2 are blended with LPG for cleaner cooking, and more than 500 jobs for women and youth are created.

The balanced participation of EU and AU private, public and civil society organisations in the consortium will ensure the knowledge transfer North-South and South-South, and the sustainability of value chains based on local value creation and entrepreneurship.

2.2.2.3.2. Advancing sustainable AGRIculture through off-grid energy and COOLing solutions in Africa

- **MINISTERE DE L'AGRICULTURE ET DU GOUVERNEMENT, Cameroon**

C. DESCRIPTION

Large parts of sub-Saharan Africa have no or only limited access to the electricity grid. Therefore, many farmers cannot adequately cool their product. This results in an enormous loss and waste of food, which is responsible for more than 10% of total anthropogenic greenhouse gas emissions worldwide. Cooling the food by inefficiently using generators on fossil fuels – the most common alternative – is not climate friendly either.

AGRI-COOL will address both problems with a containerized solution in which food can be stored and cooled. It combines the use of photovoltaic technology, thermal energy storage by phase change materials, chillers, and smart control strategies to offer an affordable, scalable and climate friendly solution.

The AGRI-COOL system will be demonstrated in rural communities in South Africa, Cape Verde, Somalia, and Zimbabwe to showcase its adaptability to different climatic conditions. A life cycle assessment following the cradle-to-grave approach will be conducted to show the system's impact on environment and Paris targets compared with competing approaches. A comprehensive market and business strategy will be developed for adoption of the system after the project. Training programs for farmers, technicians, and engineers that are tailored to local conditions will ensure that the system can be installed, operated, and maintained locally. Lastly, an advanced course for third party engineers from various African countries will be organized on the design, customization, and broader economic and social aspects of the system.

AGRI-COOL is going to empower rural African communities and industries by enhancing food security, reducing waste and fostering economic growth while contributing to achieve the African countries' targets of the Paris Agreement. A balanced consortium with about the same share of person months and budget for African and European partners ensures that African problems are tackled by solutions tailored to African conditions.

2.2.2.3.3. SUstaiNable eNergy sYstems for refugee and host communities in Africa

C. DESCRIPTION

Gathering 17 partners from 3 African, 5 European countries and 2 associated countries, SUNNY is a 48-months project that aims to provide highly replicable solutions for green energy transition and energy access in Africa. To reach that goal, five Renewable Energy Technologies, reaching TRL 7-8 will be improved, adapted to the local context and demonstrated in two sites in Uganda and Rwanda, reaching around 1300 refugees and persons in the local host populations.

The technologies developed in SUNNY will be upgraded following circular economy and local value chain approaches in order to create economic activity locally as well as ensure relevance of the solutions and long-term sustainability. To ensure uptake, a strong focus will also be made on cost-effectiveness and adapted business models. Solar home systems will ensure the access to basic energy needs at a household level (PR1). Clean hydrogen (PR2) and biogas (PR3) cooking solutions will allow cooking to be decarbonised while improving health conditions. Refrigerated food storage (PR4) and smart solar irrigation, combined with biogas, will allow to improve food security in rural African areas and address the WEF nexus. Holistic models (PR5) and assessment methods (PR8) will allow to identify and validate the benefits and sustainability of the technologies, while social innovation through among others capacity building will support the long-term socio-economic impact (PR6) and ensure local uptake as well as a strong replicability potential. Indeed, SUNNY ambitions to widely impact humanitarian energy practices through a replication plan comprising the involvement of 15 replication cases with new interoperability of technologies, training activities towards African and EU-wide energy-access and development agencies and camps managers, and policy recommendations (PR8).

2.2.2.3.4. Improving energy access and climate resilience in Africa's fringe communities

C. DESCRIPTION

We will establish a Renewable Energy Park (REEP) in a rural community fringing the Mole National Park in Ghana to demonstrate energy access and climate resilience using the water-energy-food-ecosystem (WEFE) nexus approach. We will replicate a plug-and-play microgrid developed under the ongoing Horizon project “RePower”, using solar photovoltaics (PV), battery energy storage system (BESS) and biomass combined heat and power (BCHP). To increase energy demand of the community, we will develop technologies and activities for the productive use of energy (PUE) using a circular economy approach, whereby waste generated from agriculture and food processing serves as feedstock for the BCHP plant and cookstoves.

An estimated 900 million Africans have no access to clean cooking and over one million deaths occur annually from use of firewood and kerosene involving mainly women and children. We will test and promote the use of improved cookstoves (ICS) that can be easily integrated into the current traditional cooking system. This will help to arrest intrusion into the protected wildlife park for fuelwood which has led to widespread deforestation and loss of biodiversity.

We will use life cycle approaches to measure the social, economic and environmental impacts of the project and cooperate with other LEAP-RE and CCSE projects to facilitate the adoption of the results across Africa. We will identify and catalogue sources of funding including public and private investors and international private and donor funding. Attention will also be given to building local value chains for materials supplies and a skilled workforce for the operation and maintenance of the microgrid and PUE components. The REEP will be fully operational by the end of the project period and is expected to become financially self-sustainable within 5 years. Our business model will be based on a public-private partnership and include other sources of financing such as sale of carbon credits.

C. DESCRIPTION

Using organic waste for cooling in Africa

Appropriate treatment of organic waste can enable African countries to harness green energy for cooling and refrigeration, thereby preventing food losses and reducing sanitary risks. The EU-funded KijaniBox project aims to expedite Africa’s green transition. It will convert organic waste into green energy for cooling and refrigeration applications. The project introduces innovative initiatives known as green transition enablers, including the KijaniBox System, a small-scale, off-grid industrial-grade waste-to-cooling system, application solution boxes (ASBs) tailored for three specific use cases, the Co-creation Factory to facilitate local manufacturing capabilities, and Business-in-a-Box, a business support toolkit. This initiative aims to promote sustainable economic growth and foster job creation in Africa and Europe.

C. DESCRIPTION

Innovative design and engineering for cost-effective electric vehicles: Fully electric vehicles (EVs) produce zero emissions and are crucial for meeting climate targets. The EU-funded ZEV-UP project aims to develop cost-effective and user-friendly EVs for both passenger and goods transportation. Employing innovative design and engineering techniques, the project will customise vehicles to meet specific needs, reduce material usage, and enhance the structural properties of vehicle components. ZEV-UP will also create digital-twin models to enhance vehicle development efficiency and explore novel business and usage models such as Battery as a Service. Emphasising user-centric design informed by market research, the project seeks to accelerate the transition to sustainable urban mobility and reduce greenhouse gas emissions in the sector.

C. DESCRIPTION

Addressing global challenges with electric mobility: The demand for affordable and accessible mobility solutions is important. However, traditional approaches to transportation fail to address the diverse needs of both emerging and advanced markets, leaving many without options. Additionally, concerns over environmental sustainability continue to mount, urging a shift towards greener alternatives. In this context, the EU-funded GIANTS project aims to transform electric mobility. Specifically, the project offers a customisable platform catering to diverse user needs. Featuring modular components, innovative charging solutions, and solar panels, it promises scalable electric vehicles suited for urban traffic. The project prioritises user demands, ensuring practicality in both emerging and advanced markets. By promoting modularity and interoperability, GIANTS paves the way for a sustainable future in transportation.

C. DESCRIPTION

New pathways for climate action in line with sustainable development

The escalating occurrence of natural and ecological disasters underscores the urgent need to limit global warming in line with the Paris Agreement's long-term objectives. The EU-funded NEWPATHWAYS project is set to drive this agenda by developing innovative solutions to reinforce global climate action. It will analyse and devise next-generation Paris-aligned transformation pathways to inform the 2028 global stocktake. The pathways will combine profound sectoral transformations with considerations of equity, finance and nature protection to identify opportunities for strengthening climate action, contributing significantly to global climate goals. In addition, the project aims to enhance the consistency, clarity and transparency of greenhouse gas emission reduction commitments.

C. DESCRIPTION

Sustainable energy partnership between Africa and the EU: Following in the footsteps of the LEAP-RE pilot project (2020-2025), the EU-funded LEAP-SE project will continue its commitment to long-term EU-Africa collaboration in sustainable energy. Building on LEAP-RE, it seeks to attract more stakeholders from government and funding organisations as partners. The action involves coordinating two co-funded calls steered by European and African funding organisations. The agencies will select which proposals to fund based on the ranking lists made by an independent evaluation panel. Research and academia, the private sector and society are expected to answer to the call for proposals and jointly carry out research and innovation. LEAP-SE will further monitor the funded projects, ensure the valorisation of results and promote cluster events to boost dissemination of project outcomes.

C. DESCRIPTION

Growing sustainable food security in Africa: In Africa, food and nutrition security, along with sustainable agriculture, are paramount concerns. The AU-EU High Level Policy Dialogue on Science, Technology, and Innovation emphasised this, leading to the establishment of the Pan-African Network for Economic Analysis of Policies (PANAP). In this context, the EU-funded StEPPFoS project aims to enhance capacities, foster science-policy interfaces, and strengthen PANAP. Over 48 months, StEPPFoS will employ capacity building, stakeholder engagements, and participatory monitoring to achieve its goals. With partners from Europe and Africa, including academic, research, and policy institutions, the project is poised to make significant contributions to Africa's 10-year roadmap for food and nutrition security and sustainable agriculture.

C. DESCRIPTION

Addressing global food systems and food security challenges

Global food security faces unprecedented challenges. With fragmented research efforts hindering progress, the need for a cohesive strategy is paramount. In this context, the EU-funded CEA-FIRST project aims to bring together 21 partners from Africa and Europe in a Consortium Europe Africa on Research and Innovation for Food Systems Transformation alliance. It aims to operationalise the International Research Consortium (IRC). Aligned with the Food and Nutrition Security and Sustainable Agriculture (FNSSA) Roadmap of the AU-EU High-Level Policy Dialogue, the project focuses on reducing research fragmentation. It will provide public access to a large knowledge platform, analyse research and innovation activities and establish working groups in line with the long-term IRC strategy and operational plan and the updated FNSSA Roadmap (2027-2036).

2.2.3.3. Support to the markets and trade of agroecological food products under the Food and Nutrition Security and Sustainable Agriculture (FNSSA) partnership (HORIZON-CL6-2023-FARM2FORK-01-19)

C. DESCRIPTION

Fostering sustainable aquaculture in Africa

Across Africa, traditional aquaculture struggles amidst climate challenges and resource limitations. Insufficient access to technology and training perpetuates inefficiencies, hindering growth and food security. In this context, the EU-funded INNOECOFOOD project aims to transform aquaculture in six African countries by establishing innovative ECOHUBs and Living Labs powered by AI and IoT technologies. Using renewable energy and innovative processes, the project fosters a farm-to-fork approach. With 21 partners spanning Europe and Africa, INNOECOFOOD promotes climate-smart practices and circular systems. Its goals include scoping aquaculture practices, optimising production and processing with technology, and validating quality and safety standards. By training thousands and fostering sustainable ecosystems, the project aims to reshape the future of African aquaculture.

C. DESCRIPTION

Food safety for Africa: Across Africa, food safety challenges remain unsolved largely due to weak value chain organisation, inadequate traceability, and authentication mechanisms. For instance, mycotoxin contamination plagues various food crops. Also, pesticide residues and microbial contamination, notably Escherichia coli, pose significant health risks. Food adulteration further exacerbates these issues, threatening both public health and regional trade. In this context, the EU-funded FS4Africa project aims to revolutionise food safety systems, particularly in the informal sector, through policy development, capacity building, and innovative technology implementation. Led by a consortium of experts from Africa and Europe, the project utilises interdisciplinary approaches to safeguard human, animal, and environmental health while promoting sustainable development.

C. DESCRIPTION

EU-AU cooperation for safe food in Africa

Mycotoxin contamination poses a significant threat to Africa, as contaminated food or feed can lead to acute or chronic toxicity in both humans and animals. The African Food Safety System (AFSS) plays a crucial role in addressing food safety issues within the African Union (AU). The EU-funded UP-RISE project aims to enhance food safety practices in Africa, particularly concerning mycotoxin contamination. Aligned with the current AU Food Safety Strategy for Africa, the project focuses on three regions of the AU, conducting fieldwork in Benin, Côte d'Ivoire, Nigeria, Kenya, and South Africa. Its objectives include strengthening the food safety regulatory framework, providing innovative microbiome-based solutions for mycotoxin reduction, and promoting co-creation, training, and mentoring initiatives.

2.2.3.5. Bio-based solutions for humanitarian applications (HORIZON-CL6-2023-CircBio-01-6)

C. DESCRIPTION

Waste challenges in humanitarian operations: In the complex realm of humanitarian operations, waste poses a formidable challenge, threatening the sustainability of critical endeavours. The deployment of field hospitals and livelihood programmes with waste-picking components exacerbate the issue, demanding urgent attention. Conventional waste management methods fall short, contributing to environmental degradation and jeopardising the well-being of waste pickers. In this context, the EU-funded WORM project will revolutionise waste management in the humanitarian sector through innovative solutions and a collaborative, multi-stakeholder approach. Specifically, it will integrate bio-based technological solutions, leverage procurement for waste reduction, improve waste management methods and prioritise the sustainable livelihoods of waste pickers. WORM unites medical and humanitarian organisations, suppliers, logistics providers, waste management services and academic partners.

2.2.3.6. Reinforcing science policy support with IPBES and IPCC for better interconnected biodiversity and climate policies (HORIZON-CL6-2023-BIODIV-01-12)

C. DESCRIPTION

Bridging knowledge gaps for climate, biodiversity action

Fragmented knowledge systems on climate and biodiversity pose a global challenge, hindering effective decision-making. Despite initiatives such as intergovernmental panels and science-policy platforms, disparities in capacities remain. In this context, the EU-funded RESPIN project aims to assess experiences and guide nations towards the development of science-policy interfaces. RESPIN empowers stakeholders, fostering integrated processes on a global scale, promising a breakthrough in the quest for informed decisions on climate and biodiversity. The project's overall mission is to empower knowledge holders and decision-makers to bridge regional, systemic, and stakeholder gaps. In addition to new science-policy interfaces, the project aims to establish online capacity building, and strategic partnerships to enhance integrated processes at global, national, and subnational levels.

C. DESCRIPTION

A collaborative approach to managing the Atlantic Ocean

The Atlantic Ocean faces numerous environmental challenges, including pollution, overfishing, and climate change, threatening marine biodiversity and coastal communities. These issues demand coordinated international efforts to ensure sustainable management and conservation. Despite various initiatives, a cohesive strategy and long-term commitment are crucial for effective solutions. The EU-funded OKEANO project addresses this need by supporting the All-Atlantic Ocean Research and Innovation Alliance (AAORIA). OKEANO aims to fulfil the goals of the All-Atlantic Declaration, while empowering an All-Atlantic community to sustainably manage the Atlantic Ocean. With the motto 'Connecting-Cooperating-Acting', OKEANO enhances AAORIA's initiatives, ensuring transformative science, innovation and tangible benefits for Atlantic communities.

C. DESCRIPTION

Building climate resilience through WEFE Nexus-based agroforestry systems in Africa

Climate change impacts are negatively affecting water, energy and food security in Africa. The EU-funded TRANS-SAHARA project will use agroforestry systems to build climate change resilience of vulnerable African communities. It will apply the Water-Energy-Food-Ecosystems (WEFE) Nexus approach to augment water security through community co-designed interventions. The project will introduce innovations including advanced measurement tools, assessments of environmental and socio-economic impacts, nature-based strategies for sustainable resource use and new business models to support livelihoods of local communities long-term. Large-scale pilot demonstrations in Ethiopia, Ghana and Tunisia will test these approaches. The outcomes are expected to improve agroforestry data availability, increase crop yields and farmers' incomes, create new carbon sinks through regenerated ecosystems and facilitate a policy dialogue on climate mitigation.

C. DESCRIPTION

Agroforestry solutions for resilient agro-pastoral systems in Africa

Agroforestry solutions can enhance agricultural practices, household resilience, and climate change adaptation and mitigation efforts, thereby improving biodiversity in sub-Saharan Africa (SSA). The EU-funded GALILEO project will co-develop people-centred agroforestry innovations in agro-pastoral systems across SSA. Using genuine Multi-Actor Approaches (MAA), the project will establish eight Living Labs (LLs) and four national and one regional Innovation Platform (IP) in four African Union SSA countries. The LLs, located in semi-arid zones of Senegal and Kenya and drought-prone areas of Ghana and Cameroon, will facilitate the collaborative development of adoptable scenarios. These scenarios will be assessed and compared in pilot plots. The innovations will help farmers and stakeholders diversify their incomes through new agroforestry value chains.

C. DESCRIPTION

Promoting sustainable agroforestry systems in Africa through living labs

Climate change, biodiversity conservation and socio-economic development are key challenges facing the agroforestry sector in Africa. The EU-funded AfroGrow project aims to promote sustainable agroforestry practices across the African Union, transforming agroforestry systems into resilient, multifunctional landscapes that enhance food security, mitigate climate change and foster inclusive growth. Through a network of six living labs, the project will facilitate participatory research and innovation, enabling local communities, researchers and policymakers to co-develop tailored solutions. These living labs will serve as hubs for knowledge exchange, promoting best practices in agroforestry management while also strengthening the Africa-EU partnership. Additionally, the project will develop regional suitability maps for local plants and animals with a strong emphasis on gender equality and social inclusion.

C. DESCRIPTION

Empowering Africa’s youth through sustainable food systems

With Africa’s population booming, youth unemployment remains a critical challenge, driven by a lack of opportunities in the formal sector. Most young people slip into the informal economy, which often provides precarious, low-quality jobs. Addressing this issue, the EU-funded STREAMING project seeks to develop fair, healthy, and sustainable food systems across the continent. By connecting research with practical application, STREAMING promotes innovation and entrepreneurship among diverse groups, including women, researchers, and farmers. Through networking platforms, hubs and training programmes, the project aims to bridge academia and industry, fostering sustainable practices in African food trade. Additionally, STREAMING focuses on policy recommendations to enhance resilience against climate change and improve trade relations between Africa and Europe

2.2.3.9.2. FAIR FOOD AND TRADE SYSTEMS FOR AFRICA THROUGH FOOD CONVERGENCE INNOVATION

A. GENERAL PROJECT INFORMATION

TITLE	FAIR FOOD AND TRADE SYSTEMS FOR AFRICA THROUGH FOOD CONVERGENCE INNOVATION
ACRONYM	FCI4AFRICA
GRANT AGREEMENT	101182485
DOI	https://doi.org/10.3030/101182485
EU CONTRIBUTION	€ 4 499 353,24
DURATION	48 Months
START DATE	1 November 2024
END DATE	31 October 2028
STATUS	*On-going*
PROGRAMME	HORIZON EUROPE
TOPIC	HORIZON-CL6-2024-FARM2FORK-01-11 - EU-African Union – towards climate-neutral, social just fair trade food systems
CALL OF PROPOSAL	HORIZON-CL6-2024-FARM2FORK-01
KEYWORDS	Food Trade Africa Fairness Justness Sustainability Food Convergence Innovation Use Cases

- **TECHNOSERVE KENYA, Kenya**

C. DESCRIPTION

Empowering Africa's farmers for sustainable trade

In Africa, smallholder farmers and small to medium-sized enterprises often struggle to compete in a global market characterised by stringent trading regulations and a lack of access to resources. In this context, the EU-funded FCI4Africa project presents a holistic approach to agriculture that emphasises fair, sustainable, and climate-neutral practices. Through a digital platform, it empowers farmers and businesses to achieve trade compliance while enhancing food safety. By evaluating certification criteria like deforestation-free, organic, and fair trade, FCI4Africa guides policymakers in fostering economic prosperity and social justice. Ultimately, this project aims to expand trading opportunities for African stakeholders, paving the way for a more equitable and sustainable agricultural sector

2.3. INNOVATION AND TECHNOLOGY

2.3.1. General Overview

Priority Area	Number of projects	NET EU contribution (M€)	Number of African partners (% of total)	Number of European partners (% of total)	Number of African countries	Number of European countries	EU funding to African partners (M€) (% of total)

- **SMALL INDUSTRIES DEVELOPMENT ORGANIZATION, Tanzania**
- **LAKE VICTORIA BASIN COMMISSION, Kenya**
- **THE MWALIMU JULIUS K. NYERERE UNIVERSITY OF AGRICULTURE AND TECHNOLOGY, Tanzania**

Partners:

- METEOBLUE AG, Switzerland

C. DESCRIPTION

Earth observation for climate-smart agriculture in Africa

Copernicus Earth Observation data could play a key role in improving sustainability, monitoring various sectors, and understanding weather and climate changes. In this context, the EU-funded KijaniSpace project will build on previous collaborations between the EU and the African Union, leveraging partnerships in climate, IoT, space, and agriculture to develop a solution that uses Copernicus Earth Observation data for climate-smart agriculture, research, and innovation in Africa. The project will create a Space-IoT solution box, integrating a platform, tools, Copernicus data, and local datasets. This will be used to launch training and innovation programmes, followed by two pilot demonstrations in agricultural applications.

2.3.1.1.2. Geospatial Artificial Intelligence Analysis for Tailings Storage Facilities

A. GENERAL PROJECT INFORMATION

TITLE	Geospatial Artificial Intelligence Analysis for Tailings Storage Facilities
ACRONYM	GAIA-TSF
GRANT AGREEMENT	101180263
DOI	https://doi.org/10.3030/101180263
EU CONTRIBUTION	€ 998 041,74
DURATION	28 Months
START DATE	1 November 2024
END DATE	28 February 2027
STATUS	*On-going*
PROGRAMME	HORIZON EUROPE

TOPIC	HORIZON-EUSPA-2023-SPACE-01-46 - Designing space-based downstream applications with international partners
CALL OF PROPOSAL	HORIZON-EUSPA-2023-SPACE-01
KEYWORDS	Satellite Earth Observation Machine Learning Deep Learning International Collaboration

B. CONSORTIA

Project Coordinator:

CLUSTER PARA LA MINERIA SOSTENIBLE Y SERVICIOS ASOCIADOS DE LA PENINSULA IBERICA - IBERIAN SUSTAINABLE MINING CLUSTER, Spain

Participants:

- CYBELE LAWGICAL LTD, Portugal
- TECHNISCHE UNIVERSITEIT DELFT, Netherlands
- CESKE VYSOKE UCENI TECHNICKE V PRAZE, Czechia
- UNIVERZITA KARLOVA, Czechia
- **COPPERBELT UNIVERSITY, Zambia**
- **UNIVERSITY OF THE WITWATERSRAND JOHANNESBURG, South Africa**

C. DESCRIPTION

The Geospatial Artificial Intelligence Analysis for Tailings Storage Facilities (GAIA-TSF) aims to design and develop the prototype of a system based on satellite earth observation and machine learning algorithms to achieve continuous multi-level/multi-scale characterisation and monitoring of Tailings Storage Facilities (TSFs). To achieve this goal, GAIA-TSF consortium will engage in interdisciplinary and international collaborative research and development, integrating the fields of geoscience, Earth Observation (EO), and Machine Learning (ML) Science as well as five countries (Spain, Portugal, Netherlands, Czech Republic, Zambia and South Africa). The project will focus on establishing strong interactions with user communities (mining authorities and mining industry) involved in TSF operational activities with the aim of defining clear customer-specific functional and technical requirements. These requirements will lay down Key Variables (KV) that could be used as parameters to monitor TSF as well as precise performance objectives for the GAIA-TSF prototype. On this foundation, the cooperative work between scientists and the mining operational communities will lead to the exploration of how three technical disciplines, namely satellite earth observation, geo-engineering and machine learning, can be integrated into the design of a prototype supporting the automatic detection of anomalies and risks in TSFs. Based on the designed variables and structured training datasets, different machine and deep learning algorithms will be tested and evaluated to design and develop a prototype supporting the automatic detection and prediction of anomalies and risks in TSFs.

2.4. CAPACITIES FOR SCIENCE / INNOVATION AND TECHNOLOGY

2.4.1. General Overview

Priority Area	Number of projects	NET EU contribution (M€)	Number of African partners (% of total)	Number of European partners (% of total)	Number of African countries	Number of European countries	EU funding to African partners (M€) (% of total)

- **ASSOCIATION OF AFRICAN UNIVERSITIES, Ghana**
- **ENRICH IN AFRICA CENTER PTY LTD, South Africa**

C. DESCRIPTION

Addressing the research and innovation gap between the EU and sub-Saharan Africa

In the realm of research and innovation, bridging the gap between the EU and sub-Saharan Africa is hindered by disparate ecosystems and limited collaboration avenues, which often impede the transition of valuable research into market success. This stifles economic growth and hampers job creation potentials on both continents. In this context, the EU-funded SEADE project uses a human-centred approach to develop programmes and pilot actions. SEADE offers a comprehensive toolkit through the ENRICH in Africa platform. This initiative aims to streamline the 'route-to-market' pathway, facilitating the transition of research knowledge into market success, fostering economic growth and job creation, with pilot regions serving as cultural and financial diversity benchmarks.

2.4.1.2. The African Union-European Union Innovation Platform (HORIZON-EIE-2024-CONNECT-01-01)

C. DESCRIPTION

Promoting African Union and European Union innovation initiatives

The Africa-Europe Innovation Partnership (AEIP) connects all stakeholders of the innovation value chain (researchers, innovators, incubators, start-ups, SMEs, investors, civil society and public policy makers), to build networks, share knowledge and build vital connections. The EU-funded AEIP project promotes collaboration among stakeholders and institutions engaged in various programmes. It establishes partnerships to launch activities focused on capacity building, knowledge production, investment readiness, and access to finance, tailored to the needs of target groups such as researchers, innovators, entrepreneurs, and civil society. The project aims to maximise societal, economic, and scientific impact, positioning itself as a 'network of networks' supporting the AU-EU innovation agenda while reinforcing existing initiatives.

C. DESCRIPTION

Empowering Africa's digital future

Africa's socio-economic development faces significant challenges, including the need for enhanced research infrastructure, professional competencies and innovation. The African Union's (AU) Science, Technology, and Innovation Strategy for Africa, or STISA-2024, highlights ICT as a critical priority, underscoring the potential of digital technologies to drive growth and address pressing issues. In this context, the EU-funded DIGITAfrica project aims to establish a pan-African research infrastructure in digital sciences. By leveraging expertise from five African nations and EU partners, DIGITAfrica fosters collaboration and strategic dialogue to enhance education and innovation. This initiative is poised to transform AU-EU partnerships, catalysing a digital revolution that promotes inclusivity and propels Africa toward a sustainable, green digital future.

2.4.1.3.2. EU-Africa Research Infrastructure Alliance to Foster Infectious Disease research, Knowledge sharing and Innovation

- **STELLENBOSCH UNIVERSITY, South Africa**
- **UNIVERSITY OF CAPE TOWN, South Africa**
- **UNIVERSITY OF ZAMBIA, Zambia**

Partners:

- MMV MEDICINES FOR MALARIA VENTURE FONDATION, Switzerland

C. DESCRIPTION

EU-Africa collaboration in fostering infectious disease drug discovery

Infectious diseases disproportionately burden Sub-Saharan Africa, which lacks a critical mass of appropriately skilled scientists, access to general infrastructure, enabling technology platforms, and expertise for drug discovery research. The EU-funded RAFIKI project will therefore strengthen early drug discovery capacity in Africa, focusing on infectious diseases like malaria and tuberculosis. It will establish training hubs in South, East, and West Africa to support early- and mid-career researchers through training visits, mentorships, workshops and online courses. The project will also facilitate knowledge sharing for compound library curation and improve data management using the collaborative drug discovery (CDD) vault. The consortium will engage with industry stakeholders and potential public and private funders to secure funding.

2.4.1.3.3. Health Economics for Policy Impact

C. DESCRIPTION

Collaboration between Europe and Africa in health economics

Health economics is crucial for improving health and socioeconomic outcomes by studying the interactions between individuals, healthcare providers, and clinical settings. The EU's strategy with Africa focuses on strengthening population health and health systems while promoting health policy processes in the region. The EU-funded HEPI project will leverage the ELIXIR research infrastructure to enhance scientific collaboration between Europe and Africa in health economics. It will establish Health Economics Communities of Practice in East and West Africa, align academic and political infrastructures, lay the foundation for sharing materials, methods, and data between Europe and Africa, and support higher education institutions in training highly skilled professionals proficient in health economics methods.

GETTING IN TOUCH WITH THE EU

In person

All over the European Union there are hundreds of Europe Direct centres. You can find the address of the centre nearest you online (european-union.europa.eu/contact-eu/meet-us_en).

On the phone or in writing

Europe Direct is a service that answers your questions about the European Union.
You can contact this service:

- by freephone: 00 800 6 7 8 9 10 11 (certain operators may charge for these calls),
- at the following standard number: +32 22999696,
- via the following form: european-union.europa.eu/contact-eu/write-us_en.

FINDING INFORMATION ABOUT THE EU

Online

Information about the European Union in all the official languages of the EU is available on the Europa website (european-union.europa.eu).

EU publications

You can view or order EU publications at op.europa.eu/en/publications. Multiple copies of free publications can be obtained by contacting Europe Direct or your local documentation centre (european-union.europa.eu/contact-eu/meet-us_en).

EU law and related documents

For access to legal information from the EU, including all EU law since 1951 in all the official language versions, go to EUR-Lex (eur-lex.europa.eu).

EU open data

The portal data.europa.eu provides access to open datasets from the EU institutions, bodies and agencies. These can be downloaded and reused for free, for both commercial and non-commercial purposes. The portal also provides access to a wealth of datasets from European countries.

This booklet provides an overview of projects funded under the "Africa Initiative II" of Horizon Europe Work Programme 2023-2024, entailing participation of both European and African organisations. Building on the first Africa Initiative, the Africa Initiative II of Horizon Europe continues to support the implementation of the AU-EU Innovation Agenda, focusing on the thematic priorities of Green Transition, Innovation and Technology, and Capacities for Science. With an EU contribution of approximately €300 million, the programme funds 58 projects, 35 of which involve 163 African entities from 29 countries. These projects address diverse areas including climate change adaptation and mitigation, clean energy, food and nutrition security, sustainable agriculture, agroforestry and agroecology, food safety, food markets and trade, processing and refining of raw materials, earth observation, space-based applications, digital transformation, research infrastructures and research capacity building, and coordination of Africa-Europe partnerships.
